INTERPROSE INVESTS IN AWS CLOUD COMPUTING INFRASTRUCTURE

With Amazon Web Services, InterProse now offers the highest security and infrastructure compliance in the debt recovery software market

Vancouver, WA, November 13, 2017– InterProse, a software company specializing in Software as a Service for the debt recovery market, responded to increasing security and infrastructure compliance demands by investing heavily in a partnership with CorpInfo, a premiere AWS consulting partner, and migrating to Amazon's AWS Cloud Computing Services for WebAR ACE and its customer database hosting and data storage.

> *"My number one goal when I come to work is that our customers are able to focus on their core business and don't even think about their software. By making the move to AWS, we now promise unmatched uptime performance and alleviate enormous time and capital investments in security and compliance for our customers. That feels amazing."*
>
> *-Greg Johnson, CTO*

All WebAR ACE customers "inherit" the class-leading security and compliance certifications the AWS infrastructure provides, including (but not limited to) SSAE18, FISMA, HIPAA, SOC-III, and PCI DSS. Adding to those inherited certifications are InterProse's independent audits, which InterProse completes annually with top marks for penetration testing, PCI DSS, SSAE18 SOC 1, Type II audits.

> *"Our customers are in the fight of their company's lives with the increased requirements for security and compliance. One of the ways we helped was to move our computing infrastructure to AWS. This move not only helps with compliance but also takes away the worry about server maintenance, backups, and data recovery. All rendered unnecessary in one move."*
>
> *-Matthew Hill, President & CEO*

InterProse is taking the current state, and future of, security and infrastructure compliance demands very seriously, setting the bar for the industry, and absorbing those costs for its customers. For WebAR ACE customers who need to provide evidence of security and compliance audits to their clients, InterProse provides full reports of its certifications and processes protecting their data and adhering to the various standards, saving them significant investments of time and treasure.

About InterProse

InterProse is software company serving the debt recovery market with a web-based, open-platform software solution to facilitate debt recovery efforts. Specializing in efficiency through process automations and capable of integrating various third-party technologies to keep pace with modern advancements, InterProse continually upgrades the platform at no charge to its customers and strives to be the most flexible, modern solution available for its target markets of third party debt collections and original credit grantors.
